SUMMARY

Game Design and Development student at RIT with a strong programming foundation in C#, C++, Python, Java, and JavaScript, paired with hands-on asset creation using Maya, Aseprite, and Audacity. Experienced in building and iterating on games through team collaboration, version control, and playtesting. Seeking a Summer 2027 game design co-op or internship.

COMPUTING EDUCATION

Rochester Institute of Technology, College of Computing and Information Sciences

Bachelor of Science, Game Design and Development

Rochester, NY

Expected May 2028

- **GPA:** 3.6
- Awarded Presidential Scholarship, Dean's List [Spring 2025, Fall 2025, Spring 2026]
- **Relevant Coursework:** Experience Design Games and Media, Real Time Simulation in Games, Game Design & Development 1, Problem Solving with Data Structures and Algorithms, Game Development and Algorithm Problem Solving, 3D Animation and Asset Production, 2D Animation and Asset Production, Game Design and Development 2, Real Time Simulation in games 2.

TECHNICAL SKILLS

Languages | C#, C++, Python, Java, HTML, CSS, JavaScript

Tools | GitHub, MonoGame, Unity, Godot, Visual Studio Code, Visual Studio, Trello, Maya, Aseprite, Audacity

Operating Systems | Windows, macOS, iOS, Linux

PROJECT EXPERIENCE

Fortunes Tower | Personal Project

January 2025 - Present

- Developing a third-person RPG in Unity with a three-person team featuring exploration, quests, and player progression.
- Designing and implementing core user interface systems including menus, inventory management, and quest tracking.
- Building modular UI components in Unity to support scalable gameplay features and future development.
- Collaborating with teammates using version control and iterative playtesting to refine gameplay systems.

VINSight | github.com/Jland2306/VINSight

June 2026 - August 2026

- Built a full-stack web app (Node.js, Express, vanilla JS) that analyzes used-car listings and returns an assessment.
- Scraped and parsed listings with Cheerio, combining structured-data extraction with Claude API to auto-fill vehicle details.
- Integrated two-stage Claude analysis (extraction + buyer's-advocate evaluation) returning an interactive risk report.
- Added SSRF protection and a rule-based fallback engine so the app never fails when scraping or the AI call breaks.

Stellar Rampage | github.com/Jland2306/Stellar-Rampage

February 2025 - May 2025

- Developed space themed shoot 'em up in MonoGame with unique gameplay mechanics, interactive menus, and upgrades.
- Collaborated with a team of 4, designing and developing game UI, menus, and buttons resulting in quality user experience.
- Used free assets from open source websites (itch.io and OpenGameArt.org) in order to add appealing visuals to the game.
- Presented game to a group of 20 to receive beneficial playtesting and feedback leading to further development.

Pokemon Picker | github.com/Jland2306/Pokemon-Picker

October 2025 - November 2025

- Developed a solo web application enabling users to search and filter Pokémon by name, type, and generation.
- Integrated the official Pokémon API to dynamically display detailed Pokémon data based on multi-criteria user searches.
- Implemented local storage to persist recent searches, improving usability and creating a seamless return experience.
- Designed a responsive, intuitive interface that adapts fluidly across desktop, tablet, and mobile devices.

EXPERIENCE

**Hack Your Summer
Builder**

**Coding It Forward
June 2026 - August 2026**

- Elected as a builder independently designing and developing VINSight, a web app built to address a real-world need.
- Collaborated with hundreds of student builders, exchanging feedback and ideas throughout an eight-week program.
- Built professional connections with peers and industry mentors across a range of tech and engineering careers.
